

LONG TERM PAVEMENT PERFORMANCE PROGRAM DIRECTIVE

For The Technical Direction Of The LTPP Program

Program Area: Monitoring

Directive Number: AWS-6

Date: March 11, 1997

Supersedes: AWSScan v1.11

Subject: Upgrade of AWSScan Software to Version 1.15

This new version of the AWSScan software contains modifications made in response to problem report AWSPR NA-03. More specifically, the program was modified to correct the following problem:

- The warning message for 'Maximum RH - Minimum RH for 1 hour' does not display the calculated difference, which happens to be 51.9% (a 0 value is displayed following modifications that were made in this program version).

The above modification does not require changes to the documentation; hence the Users Guide provided with the AWSScan v1.11 software remains unchanged.

AWSScan v1.15 should be installed on all computers being used by RCOC personnel to QC AWS data in the field. Installation instructions for the software are provided in the users manual as well as in the README.TXT file included with the AWSScan v1.15 release diskette.

As always, if there are any questions concerning the modification or any comments on the AWSScan program, please do not hesitate to call or submit a problem report form (AWSPR).
